Summary

Mobile engineer with 6+ years of experience delivering large-scale applications to millions of users. Specialized in React Native and Kotlin Multiplatform — a combination that allows me to share business logic across platforms while maintaining native-quality UI. I take a full-cycle approach to features: from architecture and refinement through rollout, analytics, and monitoring. Experienced in fintech environments where reliability, testability, and product impact are non-negotiable.

Experience

Stone

May 2023 – Present

Senior Software Engineer (Specialist I)

- Designed and distributed KMP features via a shared SDK integrated into multiple apps serving 8M+ users, enabling cross-platform business logic reuse and faster feature delivery across Android and iOS — Kotlin Multiplatform, Kotlin, SwiftUI, React Native.
- Designed endpoint validation flows verifying user eligibility before accessing product features, preventing invalid states across a suite of financial products with complex access rules (KYC, device tokenization, user profile).
- Refactored a core module to adopt Clean Architecture, achieving 80%+ unit test coverage, improving maintainability and reducing production incidents.
- Led technical refinement sessions and authored technical specifications, improving feature clarity and reducing implementation risk; mentored junior engineers through code reviews, one-on-ones and architecture guidance.

Software Engineer

- Implemented the mobile experimentation platform using Amplitude — enabling multiple squads to run A/B tests and feature flags across an app with ~4M users; authored documentation and led cross-team adoption.
- Refactored the homepage architecture from 34 redundant API calls to an optimized, hook-based structure, significantly reducing app startup time — measured via Firebase app_start events.
- Built a dynamic homepage driven by experimentation, enabling continuous optimization of financial product conversions for ~4M users, including personalized ordering based on user profile and eligibility.
- Implemented a personalized onboarding flow displaying contextual product offers based on user profiles (PF, REX, banking), increasing cross-sell engagement across financial services.
- Developed life and store insurance mobile flows — self-service enrollment, contract management, and billing — reducing activation time from days to minutes, impacting 20k+ active users.

OSF Digital

October 2022 – May 2023

Front-end Software Engineer

- Built a shared micro-frontend component using React and Module Federation, adopted across 3 projects, standardizing UI implementation and eliminating duplicated development effort.
- Upgraded React and core dependencies to the latest stable versions, improving application performance, security posture, and long-term maintainability.

Compass UOL

November 2021 – October 2022

Mobile Software Engineer

- Implemented a new checkout flow on a platform with ~20M active users, improving purchase experience and contributing to increased sales conversion.
- Integrated Pix instant payments, enabling real-time transactions and modernizing the payment experience for millions of customers.
- Built the Livelu Club subscription flow (monthly and annual plans), supporting ~100k subscribers and contributing to recurring revenue and retention.

IAGRO

November 2020 – October 2021

Software Engineer

- Developed an offline-first mobile application used by ~100 veterinarians conducting field inspections, enabling reliable data collection in areas without internet connectivity.
- Implemented data synchronization mechanisms ensuring consistency between offline devices and the central database once connectivity was restored.

Education

Federal University of Technology - Parana

May 2024 – April 2026

Specialization in Programming for Mobile Devices

Federal Institute of Education, Science and Technology

January 2017 – December 2020

Bachelor's Degree in Analysis and Systems Development

Skills

Languages: JavaScript, TypeScript, Kotlin

Mobile: React Native, Expo, Kotlin Multiplatform, Jetpack Compose, Compose Multiplatform, SwiftUI

Frontend: React, Next.js, Module Federation

Architecture: Clean Architecture, Modular Architecture, MVVM, SOLID

Testing: Jest, Unit Testing

DevOps: Git, Github Actions, AWS, Gradle, Fastlane

Analytics & Monitoring: Amplitude, Firebase Analytics, Firebase Crashlytics, Datadog, Sentry

Databases: Firebase Firestore, MongoDB, DynamoDB, PostgreSQL

AI Tools: Github Copilot, Claude
